Abstract (en)
[origin: WO2019038421A1] The invention relates to a generator rotor (12) for a wind power plant, wherein the generator rotor (12) has at least one dividing plane (22a, 22b) in order to divide the generator rotor (12) into at least two segments (18, 20a, 20b). The dividing planes (22a and 22b) extend along asymmetrical section lines (23a and 23b) of the generator rotor (12) in the generator rotor (12). The invention further relates to a generator stator (14) for a wind power plant, to a generator (10) of a wind power plant and to a wind power plant and to a method for transporting a generator (10).
