Abstract (en)

The present disclosure relates to an inspection method using a patch and a storage medium, the inspection method including: preparing a storage medium for storing a reagent in a non-activated state, the reagent being used to inspect whether a sample includes a target substance; preparing a patch including a network structure in which multiple microcavities are formed and a base substance that imparts an active condition to the reagent; contacting the storage medium with the patch to transfer a portion of the reagent to the patch; accommodating, in the patch, the transferred reagent put into an activated state by the base substance; and contacting the patch with the sample.
