Abstract (en)

A method (100) for sterilising a packaging material (1) with electron beam irradiation in a filling machine, wherein the method (100) comprises: arranging the packaging material (1) in the proximity of an electron beam emitter (20), activating the electron beam emitter (20) in order to sterilise the packaging material (1) as the packaging material (1) moves in relation to the electron beam emitter (20), and adjusting an acceleration voltage of the electron beam emitter (20) as the packaging material (1) is sterilised. An electron beam emitter (20) for sterilising a packaging material (1) with electron beam irradiation in a filling machine and a filling machine comprising a sterilising unit comprising at least one such electron beam emitter (20) are also provided.
