Abstract (en)  
An urging member and a can using such urging member as a base of the can, are provided for containing in the can a product comprising at least one solid component and at least one liquid component. The can with the product, at least in a ready-for-sale state, comprises a lid hermetically sealing the can and at least partially openable to allow at least partial removal of the product from the can, the base opposite the lid constituted by the urging member and a side wall extending therebetween. The urging member is configured to be urged inwardly by a user applying thereto, at least in use of the can when the lid has been at least partially opened, an urging force, thereby allowing changing by the user the state of the urging member between a first state, in which the can has a first contained volume and a second, deformed state, in which the can has a second contained volume smaller than the first contained volume.
