Abstract (en)

[origin: WO2019042763A1] The invention relates to a rotary blower brush of length (L), having a handle, a heating means, a first motor for driving a compressor and a second motor for driving a brush in rotation, the first motor, the heating means and the compressor being positioned in the handle and the second motor for driving the rotary brush being located outside the handle on a support rod, characterized in that the handle has two separate zones with substantially different diameters D1 and D2, the first diameter (D1) being substantially greater than the second diameter (D2), the zone of diameter D1 accommodating the compressor and the zone of diameter D2 representing the gripping zone of the rotary blower brush.
