Abstract (en)
[origin: WO2019042991A1] The invention relates to a control system (1) for a building (4) which is divided into fire sections (3) each comprising safety devices (2) for removing smoke from the respective fire section. A control center (5) has control buttons (7) allowing a user to provide the safety devices (2) of the fire sections (3) with control signals to control removal of smoke from the respective fire sections (3). The control system comprises a memory (10) containing a floorplan of said building and the control center (5) is provided with a display (8) and with inputs (9) for receiving detector signals from at least smoke or fire detectors (6) located in the fire sections (3). In response to reception of detector signals indicating fire or smoke the control center (5) is configured to provide on the display (8) a visual indication of the location of the fire section (3) in the building (4) and provide a predetermined illumination for the control button (7) which controls the safety devices (2) for removing smoke from the fire section (3) in the building (4) from where an indication of fire or smoke has been received.
