Abstract (en)

[origin: CA3078409A1] The invention relates to a closing device for an electrical enclosure, comprising a lock door (1) and a secondary door (2). The secondary door (2) has a U-profiled section (7), which is integrally formed on the door leaf (6) of the secondary door (2) on a vertical outer edge (5) opposite the hinge side of the secondary door, for a lock mechanism of the lock door (1), said profiled section comprising a receiving area (8) which is set back relative to the door leaf (6) and is open towards the door leaf (6). The invention is characterized in that a pivot lever (11) of a lock (12) of the secondary door (2) is secured to an outer free profiled side (10) of the U-profiled section (7) in a pivotal manner about a rotational axis (x), and the pivot lever (11) can be pivoted about the rotational axis (x) between an open position and a closed position. The invention additionally relates to a corresponding electrical enclosure.
