Abstract (en)

[origin: WO2019016333A1] The present invention relates to a linear drive having a drive motor, a first engagement means which can be driven by the drive motor, and an anti-back-bend chain, the anti-back-bend chain having a second engagement means which can engage with the first engagement means in order to drive the anti-back-bend chain. The present invention also relates to a chain depot which is suitable for accommodating at least 30% of the unloaded portion of the anti-back-bend chain.
