Abstract (en)  
[origin: WO2019043112A1] The invention relates to a method for designing a packaging facility (1). A measuring vehicle (2, 4) is moved within an area (10) in which the production facility (1) is to be erected or modified, and a position of the measuring vehicle is detected relative to the area (10). According to the invention, the measuring vehicle (2, 4) is positioned at multiple positions within the area and captures respective images using a first image capturing device (11, 13) and/or data of the area (10) at said positions, wherein at least one geometrical property of the area (10) and/or the packaging facility (1) is detected.
