Abstract (en)
[origin: CN104939754A] The invention first relates to a dust filter bag (4) for a vacuum cleaner (1), in particular an electric motor driven vacuum cleaners (1), optionally also a vacuum cleaner (1) in the form of an automatically movable floor cleaning appliance, with a holding plate (11) to which a dust bag (12) is fastened, and which has a preferably closable entry port (18) for in a direction substantially perpendicular to an opening surface of the entry opening (18) in an insertion direction of the flowing, dust-laden air, said further upstream counter to the entry direction of the dust-laden air to a mounting surface (22) of the dust bag (4) on the holding plate (11) a lower gripping portion (24) is formed of the retaining plate (11). For further development of the dust filter bag is suggested that the lower grip portion (24) in one of the insertion direction corresponding projection direction in coverage is to a mounting surface (22) forming, or in this merging portion (23) of the holding plate (11), between the lower grip portion (24) and the part (23) of the holding plate (11) engaging a space (25) remains. Furthermore, the invention relates to the arrangement of a dust filter bag (4) with a holding plate (11) and one to the holding plate (11) secured to the dust bag (12) in a vacuum cleaner (1).
