Abstract (en)

A method for the assembly of a stairlift guide rail (100) using a plurality of segments of guide rail, each segment comprising a first face (211) and a second face (212), wherein the first face (211) of a first segment is aligned with and fixed to the second face (212) of a second segment. To improve the versatility so as to be able to install a variety of stairlift guide rails, tapered segments (210) are used for a curved section (401), a tapered segment (210) having the first face (211) and the second face (212) at an angle α of at most 16° .
