Abstract (en)
This application discloses an audio component, including an enclosure, a speaker, and a connector. The enclosure includes a receptacle and a connection hole connected to the receptacle, both the speaker and the connector are accommodated in the receptacle, a plug port of the connector is connected to outside of the enclosure by using the connection hole, a sound guide channel connected between the speaker and the plug port is formed in the receptacle, and the sound guide channel is configured to propagate, to the plug port, a sound emitted by the speaker. The audio component has a relatively long service life. This application further discloses a mobile terminal.
