Abstract (en)  
[origin: WO2019048025A1] The invention relates to a method for producing a component (1) having a floor region (1.1), optionally a floor-frame transition region, optionally a frame region (1.2), optionally a frame-flange transition region and optionally a flange region (1.3), wherein a semi-finished product (1') made of a plastically deformable material is provided, wherein the semi-finished product (1') has a longitudinal extension and a transverse extension having a circumferential edge contour having a division surface (1.4), wherein the semi-finished product (1') is processed in one or more stages in one or a plurality of tools (2) for producing the component (1). The invention further relates to a tool (2) for producing a component (1).
