Abstract (en)

[origin: WO2019050564A1] This disclosure provides a peptide conjugate (PC) that can be used for targeted drug delivery, imaging a patient, or diagnosing a subject for a condition associated with overexpression and/or upregulation of CXCR4, including cancers, HIV infection, and immune disorders. The disclosure provides a high affinity CXCR4 selective binding ligand PC of Formula: P-(L-A)n (I) or a pharmaceutically acceptable salt, and PC kits and compositions. The high affinity CXCR4 selective binding ligand peptide conjugate (PC) is useful in diagnosing, treating or imaging a patient. In compound of Formula (I), n is an integer from I to the sum of (number of amino acid resides in P and the number of side-chain functional group in the amino acid residue of P); each A is independently a diagnostic agent, a therapeutic agent, or an imaging agent; L is a linker or absent; and P is a high affinity CXCR4 selective binding peptidyl ligand.
