Abstract (en)

[origin: WO2019048798A1] The invention relates to a device for water distribution in a facility, characterised in that it takes the form of a panel comprising: • a main pipe (20) comprising distribution outlets (23), said main pipe (20) being intended to form part of a water riser of the facility; • a plurality of secondary pipes (30) connected directly or indirectly to the distribution outlets (23) of the main pipe (20); • a plurality of valves (25) which can alter or stop the flow of water between the main pipe (20) and each of the secondary pipes (30); and • a support (10) to which the main pipe (20) and the plurality of secondary pipes (30) are secured, said support (10) being intended to be secured against one of the installation walls.
