Abstract (en)
A drive unit (1) for a movable leaf, in particular a window, having a drive (8) which drives a linearly movable drive element (9) which is in engagement with an entrainer (10) which, upon movement, drives a drive rod (14) of a fitting with at least one bolt (13) for locking and unlocking the movable leaf, wherein the entrainer (10) is pretensioned by a spring (15) into an engagement position with respect to the drive element (9) and, for emergency unlocking, can be moved into an unlocking position against the force of the spring (15). Furthermore, the invention relates to a window or a door and to a method for unlocking a drive on a movable leaf.
