Abstract (en)

Disclosed is an in-the-ear hearing aid, the hearing aid having a first end and a second end, the hearing aid comprising a microphone configured to receive sound, a processing unit configured to provide a processed audio signal for compensating a hearing loss of a user, an output transducer for providing an acoustic output, an antenna and a wireless communication unit for wireless communication, where the antenna is provided closer to the first end than to the second end of the hearing aid, and a polarization element configured for forming the polarization of the antenna, where the polarization element is provided between the first end and the second end of the hearing aid.
