Abstract (en)

[origin: WO2019052607A2] The invention relates to a digital thermometer, in particular a digital rectal or ear thermometer, comprising an integrated identification reading device for reading identifications, in particular animal identifiers, of living beings, to a digital rectal thermometer for detecting the body temperature of living beings, in particular of utility animals of different size classes, wherein it comprises a rotatably designed head part and a measuring tip which is integrated into the head part. The invention also relates to systems comprising the same and to computer-aided methods for controlling the body temperature.
