Abstract (en)

[origin: WO2019053065A1] The present invention relates to a positioning device (100), comprising: a plate retainer (200) having a first fixing system (1), for releasably fixing the plate retainer (200) to the plate (300), and a second fixing system (3); a receiving part (5) for an adjustment device (7), the adjustment device (7) having at least one navigation device (9) and said navigation device (9) being designed to receive a locking device and/or an instrument (15) for acting on the locking device, at least in part; the receiving part (5) has at least one third fixing system (11), or is connected to said third fixing system. One element among the group consisting of the second fixing system (3) and the third fixing system (11) is designed as, or has, a hole section (3) comprising multiple holes (3a, 3b, 3c), and the other element in the group is designed as an insertion section (11), said insertion section (11) and the holes (3a, 3b, 3c) being designed to releasably connect the second fixing system (3) to the third fixing system (11).
