Abstract (en)

[origin: WO2019057643A2] The invention relates to a device for the synchronised, smart and connected diffusion of perfuming volatile substances in the air, such as multiple fragrances and perfumes, and to manage the device according to outside conditions in time and space or according to virtual information provided by an external system, the device comprising a holder for receiving a cartridge comprising at least one capsule containing a liquid substance to be diffused, such as a perfumed or fragrant liquid, a motor designed to rotate the holder, a control module comprising motor control means to rotate the holder and diffusion control means comprising an actuator designed to act upon the capsules, causing them to diffuse the totality or part of the substance contained therein. The invention also relates to a volatile substance cartridge designed to be detachably mounted on such a diffusion device or the like.
