Abstract (en)
[origin: WO2019072612A1] The invention relates to a sheet-fed printing press having a feeder, a deliverer and at least one sheet guiding cylinder which is arranged between the feeder and the deliverer, has a gripper system, and is assigned a digital printing device and a first sheet guiding device which receives sheets from the sheet guiding cylinder. The invention is based on the object of providing a sheet-fed printing press which can be used in a relatively variable manner and by way of which, in particular, a relatively great spectrum of different products can be produced. According to the invention, the object is achieved by virtue of the fact that the first sheet guiding device (12) is configured for the selective transfer of the sheets to a second sheet guiding device (8) which transfers the sheets to the sheet guiding cylinder (3), or for the transfer to the deliverer (11), wherein the second sheet guiding device (8) is configured as a turner device (8) and can be switched over between an operating mode, in which it turns the sheets, and an operating mode, in which it feeds the sheets in a non-turned state to the sheet guiding cylinder (3).
