Abstract (en)

[origin: WO2019086206A1] The invention relates to a vehicle-based device (100) for a vehicle, in particular a rail vehicle (11, 12), said device comprising a receiving device (120) which, when passing a track-based transmission device, is suitable for receiving a signal, which is at least also frequency-modulated, from said track-based transmission device. According to the invention, the vehicle-based device (100) comprises an evaluation device (130) which is suitable for generating a crosstalk warning (UW), namely in accordance with signal levels at different frequencies of the received frequency-modulated transmission signal and/or in accordance with the frequency curve.
