Abstract (en)
[origin: WO2019048067A1] The invention relates to a device (1) for receiving an electrical or electronic component (400), in particular a relay base for receiving a relay, which device comprises a main body (100) having a receptacle (110) for the component (400). The device (1) further comprises at least one pair of connection terminals (300) connected to the two electronic connections, the pair of connection terminals (300) comprising a first connection terminal (310) for a first connection wire and a second connection terminal (320) for a second connection wire. The first connection terminal (310) is spaced apart from the receptacle (110) by a first distance in a first direction and the second connection terminal (320) is spaced apart from the receptacle (110) by a second distance in the first direction, the first distance and the second distance being different.
