Abstract (en)

[origin: KR20190085454A] The present disclosure relates to a communication method and apparatus in a wireless communication system. According to an embodiment of the present invention, the communication method in the wireless communication system comprises the steps of: receiving management object information from a network through an application level data message or higher signaling; identifying an attempt to access a non access stratum (NAS); mapping one or more access identities and one access category based on the management object information; and delivering the mapped access identities and information of the access category to an access stratum (AS).
