Abstract (en)
A control system (100, 200) of a marine vessel (110) includes a portable device (1, 201) and a receiving device (13). The portable device transmits a switch control signal (SS) to the receiving device based on an input operation. The control system of the marine vessel performs authentication control processing based on an authentication signal (SA) from the portable device, and controls opening or closing of a current path (3, 115, 115a, 115b, 203) based on the switch control signal from the portable device.
