Abstract (en)
The present invention relates to a cap for a container. The cap (10) comprises a main body having a top plate (11) and a circular sidewall (12), wherein one periphery of the circular sidewall connects to the top plate forming a closed end (1'), and the other periphery of the circular sidewall at the opposite side of the closed end forms an opened end; and a ring member (2) located at the opened end of the main body, separated from the main body by a first incision line (3), and connected to the main body by a plurality of connecting portions (31), wherein a plurality of second incision lines (4) locate on the main body or the ring member and locate at one side of the plurality of connecting portions. The cap provided by the present invention will, while in its open and/or closed state, continue to be connected to its container.
