Abstract (en)

[origin: CN113699676A] The invention relates to a knitting element guide bar assembly (1) of a warp knitting machine, and the knitting element guide bar assembly (1) has a guide bar (2) and a plurality of knitting element units (3), wherein each knitting element unit has a plurality of knitting elements (4); the knitting element unit (3) is attached to the guide bar (2) with a guide bar contact surface and is detachably fastened to the guide bar (2). The invention aims to simply design the service and servicing of the knitting element guide bar assembly. For this purpose, at least one knitting element unit (3) has a recess (6) open to one side, in which a clamping element (10) connected to the guide bar (2) is arranged, which clamping element acts on the knitting element unit (3) from the side opposite the contact surface of the guide bar.
