Abstract (en)

An insulating frame for a roof window mounted in an inclined roof structure of a building, comprising top, bottom and side frame members is disclosed. Each frame member includes an insulating member and a support member, and a plurality of frame connector brackets, where a first leg of at least one frame connector bracket, which extends in a direction substantially parallel to the outer side of an insulating frame member, or a guide member attached thereto comprises a bending section, which is bendable by essentially 90 degrees by hand during installation, as well as a method for making the insulating frame. A method for making an insulating frame is also disclosed.
