Abstract (en)

[origin: US2020232752A1] A device for positioning a stock member on a gunstock includes at least one guide element which is disposed on the stock member and movably guided in a receiving member, and a positioning mechanism which comprises at least one retaining member dedicated to the guide member and an operating member for moving the retaining member between a retaining position for locking the guide member into position and a release position for changing the position of the guide member. To provide for an easily adjustable limit stop position of the stock member, a position-adjustable stop member for limiting the extending movement of the guide member is dedicated to the one or more guide members.
