Abstract (en)
[origin: WO2019051566A1] A therapeutic device including: a substantially U-shaped frame member having an inconstant cross section and a longitudinal axis substantially bisecting the U; a plurality of protuberances in spaced relation along the inner face of the frame member and arranged in opposed pairs such that the protuberances of each pair each extends towards the other; a handle on each end of the frame member, each handle having an engagement face extending substantially laterally to the longitudinal axis; and locking means for locking the handles at a desired spacing from one another.
