Abstract (en)
[origin: WO2019057637A1] The invention relates to a machine tool device (12) for a machine tool (10), in particular a portable machine tool (10), having at least one coupling unit (18) for coupling a machining tool (14) and at least one drive unit (16) for driving the coupling unit (18). According to the invention, the machine tool device (12) comprises a recuperation unit (24) which provides in at least one deactivated state of the drive unit (16) electrical energy for supplying at least one functional unit (36) from a kinetic energy of at least the coupling unit (18).
