Abstract (en)
[origin: WO2019101439A1] The invention relates to a measuring system (1) for sensing the spatial position of a straight securing pin (26) provided with a centering recess (29) at each end-face free end of said securing pin, in particular a securing pin (26) of this type that secures a rotor blade (28) to a rotor (27). The invention further relates to a method for removing securing pins (26) of this type by drilling, in which method a measuring system (1) of this type is used.
