Abstract (en)
In a first aspect, the present invention relates to a rigid and aerodynamic device for external protection for motorcycle and bicycle vehicles with 2 to 4 wheels. This removable dome type device is formed by multiple overlapping panels that form an oval shell type structure, which protects both the vehicle and the pilot from external weather conditions and physical damage in the event of a collision. In a second aspect, the present invention describes a rigid and aerodynamic outer protection device for the head formed by multiple overlapping panels that form an oval shell-shaped structure, which protects the user's skull from external weather conditions and physical damage.. In case of collision.
