Abstract (en)
The present invention comprises a system (1) for producing packages (1000) comprising a bag (100) of flexible material comprising a first face (101) and a second face (102) and an element (200) folded along a folding line (203). The system (1) comprises a first station (130) comprising closing means (132) configured so as to close said bag (100), a second station (140) comprising application means (11, 12a, 12b, 13, 14) configured so as to apply said folded element (200) to said bag (100), and transport means (160) configured so as to transport said bag (100) from said first station (130) to said second station (140). In such system the transport means (160) are configured so as to grasp said bag (100), at said first station (130) before the closure of said bag (100) by means of said closing means (132) is finished, and to transport it from said first station (130) to said second station (140) continuing to grasp it.
