Abstract (en)

The invention provides pigment particles and an organic modification layer formed on a surface of the pigment particles; the organic modification layer is a surfactant layer or a polymer material layer formed on the surface of the pigment particles; an organic matter content W_{surf} of the specific surface area of the pigment particles is in a range of 0.1-2% g/m². The pigment particles provided by the invention have good stability, and the electrophoretic display prepared by using the pigment particles of the invention has good optical performance.
