Abstract (en)

Embodiments of the present application provide a communication method under a wireless base station separation architecture, a functional entity and a wireless base station. The method comprises that: a Distributed Unit (DU) provided with all control plane protocol stacks of an air interface receives a Radio Resource Control (RRC) message sent by User Equipment (UE); the DU decodes and identifies the RRC message, so that the RRC protocol is terminated on the DU. The embodiments of the present application also provide a corresponding functional entity and a wireless base station. By means of the embodiments of the present application, the processing delay of a control plane flow can be reduced.
