Abstract (en)

[origin: WO2019057956A1] A consumable cartridge (10, 110, 210) for an aerosol generation device is disclosed. The cartridge contains an aerosol forming material such as tobacco can release vapour upon receiving heat from a heater (30, 330). The cartridge comprises a slot (22, 122, 222) for receiving the heater (30, 330). The slot (22, 122, 222) can partition the aerosol forming material into a first portion and a second portion (26, 28), wherein an airflow path extends in a first direction in the first portion and a second direction in the second portion, wherein the first direction is opposite to the second direction.
