Abstract (en)

[origin: WO2019057976A1] A consumable cartridge for an aerosol generation device is disclosed. The cartridge (10) contains an aerosol forming material (14) such as tobacco that can release vapour upon receiving heat from a heater. The cartridge (10) comprises a casing (12) with a tab (24) that moves between an open position and a closed position, where the open position extends from the casing (12) to allow rapid cooling of the tab so that the user can easily grip the tab (24) and extract the cartridge (10) from the aerosol generation device.
