Abstract (en)
[origin: WO2019063755A1] The invention relates to a motor vehicle lock having a lock latch (2) and a pawl arrangement (3), wherein the lock latch (2) can be pivoted into at least one locking position, in particular into a main locking position and, where appropriate, into a prelocking position, wherein, with the motor vehicle lock (1) mounted, the lock latch (2) in a locking position is in holding engagement with a locking part (4), wherein the pawl arrangement (3) has a pivotable primary pawl (5) which can be brought into an engaged position, in which it blocks the lock latch (2) in a locking position against pivoting in its opening direction (6), and which can be brought into a lifted-out position, in which it releases the lock latch (2) in its opening direction (6), wherein the pawl arrangement (3) has a pivotable secondary pawl (7) which can be brought into an engaged position, in which it blocks the primary pawl (5) in its engaged position against pivoting into its lift-out direction (8), and which can be brought into a lifted-out position, in which it releases the primary pawl (5) in its lift-out direction (8), wherein the primary pawl (5) and the secondary pawl (7) are or can be coupled to one another in such a way that the secondary pawl (7), when pivoting in its lift-out direction (10), carries along the primary pawl (5) in its lift-out direction (8).
