Abstract (en)

[origin: WO2019115064A1] The invention relates to a door handle assembly (3) of a vehicle door (2), having a handle support (9), a handle (4) which is mounted on the handle support (9) and is arranged so as to run flush with the outer contour (8) of the vehicle door (2) in a non-use position and which is designed to be movable into an actuation position, and a first lifting mechanism (11) and a second lifting mechanism (14), each of which is coupled to the handle (4) so as to transmit a movement, wherein the handle (4) is arranged so as to protrude relative to the outer contour (8) of the vehicle door in the actuation position in comparison to the non-use position and can be actuated by the user in order to open the vehicle door (2), and the first lifting mechanism (11) has a first pivot axis (15) which is arranged on the handle support (9). The first lifting mechanism (11) and the second lifting mechanism (14) form a scissor kinematic system and are coupled together so as to transmit a movement.
