Abstract (en)

[origin: WO2019115065A1] The invention relates to a door handle assembly (3) of a vehicle door (2), having a handle support (9), a handle (4) which is arranged so as to run flush with the outer contour (8) of the vehicle door (2) in a non-use position and which is designed to be movable into an actuation position, and a first lifting mechanism (11) and a second lifting mechanism (14), each of which is coupled to the handle (4) so as to transmit a movement, wherein the handle (4) is arranged so as to protrude relative to the outer contour (8) of the vehicle door (2) in the actuation position, and the first lifting mechanism (11) has a first pivot axis (15) which is arranged on the handle support (9). The first lifting mechanism (11) has a first joint axis (16), whereas the second lifting mechanism (14) has a second joint axis (18) and a second pivot axis (17) which is arranged on the support (9) and is coupled to the first lifting mechanism (11) via a coupling rod (19) so as to transmit a movement, said first pivot axis (15) or second pivot axis (17) being driven by a motor.
