Abstract (en)
[origin: WO2019063501A1] The invention relates to an operating attachment (1) for arrangement on a predefinable switching device (2) and for operating a pivotable switching device toggle (3) of the switching device (2), wherein: the operating attachment (1) has a manual operating part (13); the manual operating part (13) is situated on a shaft (6) of the operating attachment (1); a switch-on projection (7) for pivoting the switching device toggle (3) in a first pivot direction is situated on the shaft (6); and a switch-off projection (8) for pivoting the switching device toggle (3) in a second pivot direction opposite the first pivot direction is situated on the shaft (6). According to the invention, a housing stop (9) for contact with a stop edge (10) of the switch-off projection (8) is situated in the housing (4), and the switch-off projection (8) is designed to yield resiliently such that it is bent for contact with the housing stop (9) on the housing when loaded with a predefinable first force which acts in the direction of the manual operating part (13) and parallel to the rotation axis of the shaft (6).
