Abstract (en)
[origin: WO2019061194A1] Systems and methods for performing carrier aggregation in wireless sidelink communications are disclosed herein. In one embodiment, a method performed by a first node is disclosed. The method comprises: obtaining configuration information related to sidelink data transmission between the first node and at least one second node; configuring a sidelink transmission scheme based on configuration information; and transmitting sidelink data to the at least one second node on a plurality of carriers according to the sidelink transmission scheme.
