Abstract (en)
[origin: EP3689569A1] The present invention relates to a splitting machine which comprises a transport element which comprises a carriage adapted to move along the conveyor belt from a first locking position of the material to be cut/split to a second position at said cutting station/split, and vice versa, wherein said carriage is provided with a plurality of arms capable of sliding vertically, each independently of the other arms, from a first rest position wherein the arm is not in contact with the block to be cut/split to a second gripping position on the block to be cut.
