Abstract (en)

[origin: EP3690103A1] The present disclosure relates to a washing machine and a method for controlling the washing machine. The washing machine may include a tub (3), a vibration sensor (77) provided at the tub (3), a drum (42, 4) accommodating laundry therein and provided to be rotatable in the tub (3), and a controller (60) configured to measure a value regarding multi-axis vibration occurring in the tub (3) with the vibration sensor (77) at a detection section in which the drum (42, 4) rotates at a specific rotational speed (108) during a dewatering process, determine a predicted value of maximum vibration displacement expected to be generated in the tub (3) based on the measured value, and determine whether to initialize the dewatering process at the detection section based on the determined predicted value of the maximum vibration displacement and a predetermined reference value (S530).
