Abstract (en)  
It is an object of the invention to provide an air conditioning indoor unit that does not form dew condensation on a surface not followed by cool air even in a state where an airflow direction adjusting blade is used with cool air flowing along one of an upper surface and a lower surface. An air conditioning indoor unit (1) includes a blade member (32) constituting an outer contour of a first airflow direction adjusting blade (30) and having a concave portion (33) formed by reducing a thickness of the blade member (32), and the concave portion inhibits heat transfer. This also inhibits cooling a surface, not followed by blow-out air, of the blade member (32) to inhibit dew condensation.
