Abstract (en)

[origin: WO2019070645A1] Mini nanodrugs that include a polymeric-based molecular scaffold with one or more peptides capable of crossing the blood-brain barrier, one or more plaque-binding peptides and one or more therapeutic agents attached to the scaffold are provided. Methods of treating brain diseases or abnormal conditions, and imaging of the same in a subject by administering the mini nanodrugs are described. Methods for reducing formation of amyloid plaques in the brain of a subject are disclosed.
