Abstract (en)

[origin: WO2019068709A1] The invention relates to a CVD reactor having a gas-tight and evacuable reactor housing (1) and an inner housing (2) arranged therein, which inner housing has means (3, 4) for the infeed of a process gas and means (5) for holding a substrate (6) for treatment in the inner housing by means of the process gases, wherein the inner housing (2) has a loading opening (7) which can be closed off by a sealing element (11) of the closure element (10), and the sealing element (10), in its closure position, bears with an encircling sealing zone (10') against a counterpart sealing zone (7) which encircles the loading opening (7) on the outer side of the inner housing (2), wherein the sealing element (11) is fastened to a carrier (12) as to be adjustable in terms of inclination and/or pivotally movable about at least one spatial axis (X, Y, Z) and/or so as to be elastically deflectable in the direction of one of the spatial axes (X, Y, Z).
