Abstract (en)

[origin: WO2019091578A1] The invention relates to a folding fitting for the raising and folding-down, respectively, of a gable (2) at a material carrier (3). The folding fitting (1) comprises a plate (4) that is fixed at one end of the gable (2), which plate has a groove (5) with a circular end (6) having a diameter (D) that exceeds the width (B) of the groove (5). A partly circular swivel (7) that is fixed at the material carrier (3) and has opposing, beveled surfaces (8), is arranged to run in the groove (5) in the plate (4) for guiding it when the gable (2) is raised or folded-down. The plate has an open groove (9) for the housing of a locking pin (10) that is fixed at the material earner (3) for locking the gable (2) in its raised position, whereby the longitudinal axes (C) of the groove (5) and the open groove (9) extend in the same direction.
