Abstract (en)
[origin: WO2019069330A1] Construction module (10) made of a fibre-reinforced composite material and comprising a first component (21) defined by a first plane reticular body (11) defined by oblong elements (12,13) crossing each other and having a first surface (14), walkable in use, and a second surface (15), opposite said first surface (14). A plurality of projecting portions (17, 18) are integrally associated with said first body (11) and project orthogonally with respect to the second surface (15). The construction module (10) comprises further a second plane component (22), parallel to the first component (21) and integrally associated with the projecting portions (17, 18).
